PROJECTS

PHOTOSIGNIFY | Github

September-2023

Developed a Flask-based API using TensorFlow and Keras for image classification.

Trained a Convolutional Neural Network (CNN) model to classify images as faces or signatures. High accuracy achieved.

MOTIONPRINT | Github

(Ongoing)

Developed a unique identification system for individuals using data from

accelerometers and gyroscopes. It's an ensemble of 5 Machine learning models to

recognize individuals based on motion patterns . My ongoing efforts are focused on

feature engineering and selection to further improve the accuracy of the system.

MOVIE RECOMMENDATION SYSTEM | Github

April-2023

Developed a python based recommender system that Utilizes Bag of Words Model

for personalized recommendations based on user-created tags. Provides similarity

score-based recommendations .Built an intuitive user interface using Streamlit

ECOMMERCE WEBSITE | Github

(March 2023)

Developed an eCommerce project utilizing the MERN (MongoDB, Express.js, React,

Node.js) stack and implemented Redux for state management. This eCommerce

platform provides a seamless and user-friendly experience for both customers and

administrators.
